Risk Theory and Reinsurance
Griselda Deelstra & Guillaume Plantin

Contents

1 Elements of Risk Theory ........................................... 1
  1.1 Generalities on Risk Theory ................................. 1
    1.1.1 Premium Calculation Principles and Their Properties ... 1
    1.1.2 Orderings of Risks ..................................... 7
  1.2 The Collective Model ......................................... 13
    1.2.1 The Individual Model Versus the Collective Model .... 13
    1.2.2 Dynamic Collective Model Versus Static Collective Model ........................................... 15
    1.2.3 Typical Properties of the Collective Model .......... 15
    1.2.4 Principal Frequency Models Used in Practice ........ 17
    1.2.5 Principal Claim Size Distributions Used in Practice ... 20
    1.2.6 Two Methods to Compute the D.F. of a Collective Model 23
  1.3 Ruin Theory ................................................... 26
    1.3.1 Introduction: Reinsurance and Solvency of Insurance Companies ........................................... 26
    1.3.2 The Cramer-Lundberg Model ............................. 28
    1.3.3 The Lundberg Inequality ................................ 30
    1.3.4 The Beekman Convolution Formula ....................... 32
    1.3.5 Application of the Smith Renewal Theorem to Ruin Theory ........................................... 36
    1.3.6 Probability of Ruin and Orderings of Risks .......... 38
  1.4 Risk Theory of Fat-Tailed Laws ............................... 40

2 Reinsurance Market Practices ..................................... 45
  2.1 A Legal Approach to Reinsurance ............................ 45
  2.2 Some Data on Reinsurance .................................... 46
    2.2.1 Cession Rates ......................................... 46
    2.2.2 Reinsurance Supply ..................................... 47
  2.3 Methods of Reinsurance ....................................... 48
2.4  Kinds of Reinsurance ..................................... 48
2.4.1 Proportional Reinsurance .............................. 51
2.4.2 Non-proportional Reinsurance ......................... 54

3  Optimal Reinsurance ...................................... 59
3.1  Optimal Risk Sharing ................................... 59
3.1.1 Pareto Optimal Allocations ............................. 60
3.1.2 Decentralization of the Optimum by an Efficient and
Complete Market ............................................. 61
3.1.3 Other Economic Analyses of Reinsurance ............. 63

3.2  Actuarial Approaches ..................................... 64
3.2.1 Optimal Design ......................................... 64
3.2.2 Optimal Priority and Retention ......................... 69
3.2.3 Numerical Examples .................................... 73

References ...................................................... 77
