Turkey’s authoritarian drift is undoubtedly complicating relations with the United States. However, Prime Minister Recep Tayyip Erdoğan remains one of the most tolerable heads of state in the region and Washington should not allow this to undermine an invaluable alliance. A huge corruption scandal implicating figures with close ties to Erdoğan has been at the top of the agenda in Turkey over the past month, tarnishing his image together with that of his government. Three of his ministers were forced to resign, spurring an unprecedented cabinet reshuffle. This was followed by dismissals within the police force and judiciary. An overconfident Erdoğan’s growing authoritarianism is paradoxically undermining him and polarizing Turkish society, leading the country toward instability in a Middle East in which Turkey had previously been a stabilizing force.

The AKP, which came to power in 2002 with the aim of bringing justice and transparency to politics, has been caught up in an unparalleled corruption scandal at the highest levels of government. Serious in and of itself, the scandal has also marked a definitive rupture between Turkey’s two most important political and religious forces whose alliance led to considerable economic progress over the past 10 years, and even advances in governance. But the honeymoon is now over between the political establishment represented by Erdoğan and the spiritual forces embodied by Fethullah Gülen—a cleric who heads a very powerful transnational religious community that wields influence over education, the media, business and now politics, with his sympathizers suspected of having infiltrated the police and judiciary.

After 12 years of jointly opposing the powerful Turkish army, once the linchpin of the political system and now defeated, the Erdoğan-Gülen alliance has been shattered by a fratricidal competition in which each party is revealing its true nature: the AKP is falling back on an authoritarian Islamist ideology, while the Gülen movement is unveiling ambitions that are more political than spiritual. Both have much to lose in this contest, but Turkey could lose more.

Erdoğan categorically denies corruption within his cabinet. Speaking of a Gülenist coup d’état, he has initiated an unprecedented purge of the shadowy forces that he sees as being against him in the police and the judiciary. In so doing, he is protecting himself in the short term, but by launching a witch hunt against Gülenists in government institutions, he is undermining the entire political system. This will most certainly create divisions within the country. As for the Gülen movement, its fight is existential, for its survival is at stake. It is convinced of this, because a few weeks before the
events of December 17, the Prime Minister announced that he wanted to close the country’s
dershane—private university preparatory schools that number in the thousands—nearly half of
which are run by companies affiliated with the Gülen movement. If implemented in 2015 as planned,
this measure could precipitate Gülen’s economic and spiritual ruin, as these schools represent a
financial windfall while serving as incubators for Gülenist leaders.

Political and institutional instability is therefore likely to increase during 2014. And the regional
context—itself subject to deep political upheavals—will not calm matters. In such a delicate
situation, Washington will have to deal with its traditional Turkish ally in a rather different way.

It is now difficult to present the AKP as an ideological model for the new Arab world. Ultra-popular
during the euphoric days of the Arab Spring, Erdoğan lost his popularity when that springtime turned
into a nightmare in Syria. He was then repudiated when the military dictatorship returned to power in
Egypt and overthrew his ideological allies, the Muslim Brotherhood. Since then, he has lost the
upper hand.

Given this context, Washington should not further isolate Erdoğan by criticizing his encroaching
authoritarianism, to avoid throwing Turkey into chaos. Excessive criticism would validate the claims
of international conspiracy theorists. Indeed, in Turkey there are those in every political camp who
believe that whatever the domestic crisis, the United States is behind it. Criticizing Erdoğan is
counterproductive, feeds anti-Americanism, and only strengthens the Islamist electoral base in the
Anatolian hinterlands. The fact that Gülen has been living in exile in Pennsylvania since 1999 and
runs the most substantial religious community that now wields influence in the very heart of the state
stakes the popular obsession with conspiracy theories.

Erdoğan’s shift, while troubling, can be explained by the tension of the regional situation, the failure
of the Arab Spring, and the worsening of the Syrian crisis combined with Turkey’s unfortunate and
inevitable involvement in it. Erdoğan remains one of the rare regional leaders to have been
democratically elected. And Turkey remains a country in which the people and the government
respect the power of the ballot box. Erdoğan’s reaction is easy to criticize, but it isn’t up to the U.S.
to condemn him. Rather, Washington should take a patient approach and trust in Turkish voters to
place their country on a more democratic path with the local elections in March and a presidential
poll in August.

**About the Middle East Program**

The Carnegie Middle East Program combines in-depth local knowledge with incisive comparative
analysis to examine economic, sociopolitical, and strategic interests in the Arab world. Through
detailed country studies and the exploration of key crosscutting themes, the Carnegie Middle East
Program, in coordination with the Carnegie Middle East Center in Beirut, provides analysis and
recommendations in both English and Arabic that are deeply informed by knowledge and views
from the region. The program has special expertise in political reform and Islamist participation in
pluralistic politics.
